Page Yield: **See Chart**

MSE KEY BENEFITS

CIG's robotic hopper re-mating process ensures equal distribution of material, while maintaining the original OEM look and feel.

This MSE brand product has been approved using the markets most exhaustive testing protocols, including: environmental stress testing, accelerated aging testing, and shipping simulation.

This cartridge utilizes multiple proprietary and patent pending technologies including Secure Seal Technology.

Every aspect of our MSE brand products, from quality and reliability to aesthetics and environmental impact, is thoroughly analyzed on an ongoing basis. We look for areas of improvement beyond the industry standard and create ground-breaking technologies to keep pace with OEM design. The result is Your Best Alternative to the OEM.

MSE's Signature Products represent offerings that overcame industry-wide technological barriers. MSE's unique and patented technologies broke down these barriers, creating products that serve as the only true alternative to the OEM.

CIG's patent pending processes enabled us to overcome OEM technology hurdles, specifically with the new OEM seal technology which is wound up internally by the agitator at cartridge install. With our commitment to 100% post-testing all of our remanufactured toner cartridges, our engineers developed groundbreaking Secure Seal Technology that permits post testing without compromising the effectiveness of the toner seal.
